FROG LOGIC

The Calm Plan

A gentle UK guide to getting ready for power cuts, floods and other emergencies, for neurodivergent adults and families

by Frog Logic and Samantha Hall

The Calm Plan

Text and illustrations © 2026 Samantha Hall, trading as Frog Logic. All rights reserved.
You're welcome to copy the fill-in pages for your own household.

Please read this. This book helps you get ready. It is not a replacement for the emergency services or for official advice in a real emergency. If anyone is in danger, call **999**. Always follow instructions from the emergency services, your local council and official emergency alerts.

All the safety information in this book comes from official UK sources: the government's Be Ready campaign, GOV.UK, the NHS, the Environment Agency's Floodline, the electricity networks' 105 service, the Priority Services Register, the British Red Cross and the London Fire Brigade. They're listed at the back, with the date they were checked. Advice can change, so check **beready.campaign.gov.uk** for the latest. Some details are different in Scotland, Wales and Northern Ireland; where they are, the book says so.

The ideas for comfort, routine and communication are gentle suggestions from someone who's been there, not medical advice. Take what helps and leave the rest.

Frog Logic makes calm, practical things for busy brains: printable planners, plain-English guides and cosy frog gifts.

PART 1

Hello, and how to use this book

Hi, I'm Sam. I'm neurodivergent, and I run Frog Logic from my lounge.

In October 2026 the government started asking every household in the UK to be ready to manage on its own for three days if something goes wrong: a long power cut, a flood, a storm, or something bigger. That's sensible advice. But a lot of the guides that followed were either a long shopping list or quietly terrifying, and neither of those is much use to a brain that already finds change hard.

So this is the gentle version. It's built around one idea: **you don't have to do it all, and you don't have to do it all at once.** A plan you made calmly, on an ordinary Tuesday, will look after you far better than one you panic-buy on the day.

How to use it

- **Start with Part 3.** Ten minutes of sign-ups and a bit of paper make the biggest difference of anything in this book, and they're free.
- **Read the rest in any order,** a page at a time if that's what works. Nothing here is a test.
- **Fill in Part 10 as you go.** Those pages become your household's plan. Keep them somewhere everyone can find them.
- **Tick things off.** Every tick is a small, real bit of safety. Half a kit is much better than no kit.

If reading about emergencies makes you anxious

That's really common: in the government's own survey, nearly one in five people said thinking about emergencies is stressful or worrying. It's alright to read this in short bursts, with a drink and something comfy. Stop when you've had enough. The point of planning is to worry less, not more.

PART 2

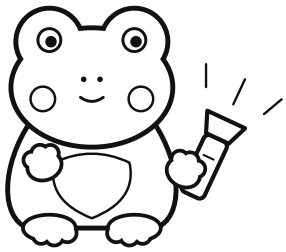

Why emergencies feel bigger to a busy brain

An emergency takes away the things that hold a day together: lights, heating, phone signal, the internet, the shops, the plan you had for this afternoon. For a lot of neurodivergent people those aren't just conveniences. They're how we stay regulated.

So it's normal if a power cut that someone else shrugs off feels enormous to you. Some of what can make it harder:

- **Sudden change.** No warning, no plan, no idea how long it will last.
- **Sensory overload.** Sirens, alarms, phone alerts, people talking at once, cold, darkness, bright torches.
- **Losing routines and safe foods.** The fridge is off, the shop is shut, the usual meal isn't possible.
- **Too many decisions at once,** exactly when thinking feels hardest.
- **Communication.** Explaining what you need to a stranger, a helper or a call handler when words are hard to find.
- **Losing your tools.** Phone, apps, reminders, music and medication alarms can all stop working.

None of that means you can't cope. It means your plan needs to include **you**: your comfort, your routines, and a way to tell people what helps. Most emergency guides stop at tins and torches. This one carries on.

The kindest thing you can do for future you

Make the decisions now, while you're calm. Then on the day you don't have to think, you just follow the plan you already wrote.

PART 3

Ten minutes that make the biggest difference

These are free, mostly online, and you only do them once. If you only do one part of this book, do this one.

- [ ] **Join the Priority Services Register.** It's a free service in England, Scotland and Wales for people who need extra help during a power, gas or water cut: for example people with a disability or long-term condition (including mental health and cognitive conditions), people of pension age, households with children aged five or under, people with communication needs, or anyone who relies on powered medical equipment. Depending on your needs it can mean priority updates, advance notice of planned cuts, a nominated contact, and practical help during an outage. Find out how to join at **thepsr.co.uk** or contact your energy supplier and network operator. In Northern Ireland, ask about the Care Registers at nidirect.gov.uk.
- [ ] **Sign up for flood warnings.** In England they're free from the Environment Agency: sign up at **gov.uk/get-flood-warnings** or call Floodline on **0345 988 1188** (24 hours). You can choose a call, text or email, and you can ask for warnings to go to a friend or relative too. Scotland and Wales have their own services, linked from the same page. Flood warnings cover rivers, the sea and groundwater, but not sudden surface-water flooding.
- [ ] **Write the important numbers on paper.** If your phone dies, your contacts go with it. There's a page for this in Part 10. Include **105** for power cuts (England, Scotland and Wales; it's 03457 643643 in Northern Ireland).
- [ ] **Add emergency information to your phone.** Set up ICE contacts or Medical ID, so someone helping you can see who to call and what matters medically, even when the phone is locked.
- [ ] **Learn what an emergency alert is.** The government can send an alert to phones near a danger to life, like severe flooding. Your phone will make a loud siren-like sound for about ten seconds, even on silent. It's loud on purpose. Knowing that in advance makes it much less of a shock (more in Part 6).
- [ ] **Check your smoke alarms.** The government's advice is to test them at least once a month.
- [ ] **Check your flood risk.** In England you can check the long-term flood risk for your postcode at gov.uk/check-long-term-flood-risk.
- [ ] **Find your stopcock, fuse box and gas meter.** Know where they are and how to turn them off, and write it down in Part 10.

PART 4

The three-day basics, without the stress or the waste

The government asks every household to be able to manage for **three days**. That's the time it can take for help and services to reach everyone after something big. It isn't about bunkers. It's mostly things you probably have in a cupboard already, gathered in one place.

Here is the official Be Ready checklist, with a few notes. There's a tick-list version in Part 10.

Water

The Be Ready advice is **3 litres of drinking water per person, per day**. For three days that's 9 litres each, about five big supermarket bottles. More is needed for cooking and washing; the British Red Cross suggests around 10 litres per person per day if you include those. Don't forget pets.

Food

Enough **non-perishable food for three days**: food with a long shelf life that doesn't need a fridge or cooking, like tinned meat, fish or vegetables, dried fruit and nuts. Include some things you can eat cold, because you may not be able to cook. And the official advice says it's best to **buy food you'd usually eat.** That's very good news for anyone with safe foods: your emergency food can be the food you already like.

Don't forget a **tin opener** that doesn't need electricity.

Light and warmth

A **torch and spare batteries.** Torches are safer than candles. Blankets, sleeping bags and warm clothing, because homes can get cold very quickly when the heating goes off.

Staying informed and in touch

An **FM radio** that runs on batteries or a wind-up handle, so you can hear local news if phones and internet are down. A **charged power bank** for your phone (and any compatible medical device). Keep it topped up.

Money and documents

Cash, a mix of coins and notes, in case card payments and cash machines aren't working. **Copies of important documents** such as ID, insurance details and instructions for any medical equipment, ideally in a waterproof bag. **Important phone numbers on paper,** with your regular medicines and doses.

Health and hygiene

A **first aid kit** (plasters, bandages, a thermometer, antiseptic, sterile dressings, gloves, tape and tweezers are the kind of things suggested). Your **essential medication and medical supplies.** Hand sanitiser, wet wipes and bathroom products.

If they apply to you

Babies: formula (ready-made is best, as powdered formula may not be safe to make without boiling water), nappies and wipes. **Pets:** food and bottled water. **Equipment:** spare chargers or batteries for anything you rely on, spare glasses, hearing aid batteries.

"It's too expensive." "It'll just go to waste." "I haven't got room."

These are the top three reasons people give for not preparing, and they're all fair. Here's how to get round them.

Build it slowly

You don't need to buy it all at once. Add one or two things to your normal shopping each week. In Part 10 there's a twelve-week plan that does exactly that. Lots of what's on the list is already in your home; it just needs gathering in one place.

Eat it and replace it

Because the food is food you normally eat, you can use it and replace it as you go, oldest first. Nothing goes out of date and nothing is wasted. The official checklist suggests checking dates **every six months**. Put a reminder in your phone, or on your calendar for the clocks changing in spring and autumn.

Use a box, not a room

Most of a three-day kit fits in a crate, a storage box or the bottom of a wardrobe. Water bottles can live under a bed. Label it clearly so everyone in the house knows what it is and that it's not for raiding.

Share with your neighbours

The government suggests talking to neighbours about helping each other during an outage. Not every house needs every item. One radio and one good torch on a street can go a long way.

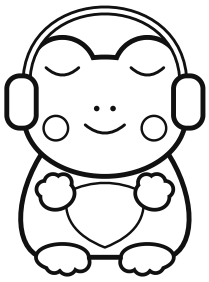

The grab bag

If there's ever a chance you might need to leave home quickly (because of flooding, for example), the Be Ready advice is to keep some essentials packed together. A grab bag is a small bag by the door with the things you'd need for a short time away: medicines, documents, phone charger and power bank, cash, a torch, a change of clothes, glasses, and your calm kit (next part). There's a checklist in Part 10.

PART 5

Your calm kit

This is the part most emergency guides leave out. Your calm kit is the small collection of things that help **you** stay regulated when everything else changes. It's every bit as important as the torch.

Everyone's is different. Here are ideas to choose from; there's a page in Part 10 to write down your own.

For noise

- Ear defenders or earplugs
- Headphones, with music, podcasts or white noise **downloaded** so they work offline
- A spare charged power bank just for these

For light

- Sunglasses or an eye mask
- A soft, warm-coloured torch or lantern, not only a dazzling one

For your body

- A favourite hoodie, blanket or weighted item
- Thick socks and a hot water bottle (fill it while you still have hot water)
- Fidget or chew items

For food

- A few of your safe foods that don't need cooking or a fridge
- A familiar cup or water bottle

For your mind

- A book, puzzle, colouring book and pencils, cards, knitting: anything that works without power
- A comfort item, whatever your age

For your routine

- A written copy of your usual daily routine, so you can keep as much of it as you can
- A paper copy of your medicine times, if you rely on phone alarms
- Your "About me" card (Part 7)

A tip for families

Give each person their own small calm kit with their name on it. Knowing exactly where "my things" are is a comfort in itself, and it stops arguments over the one pair of headphones.

PART 6

The first hour: simple scripts for when it happens

When something goes wrong, it's hard to think. So here are short, step-by-step scripts you can simply follow. They're also printed as cut-out cards in Part 10, to keep with your kit.

Before anything else: if anyone is in danger, call 999.

If the power goes off

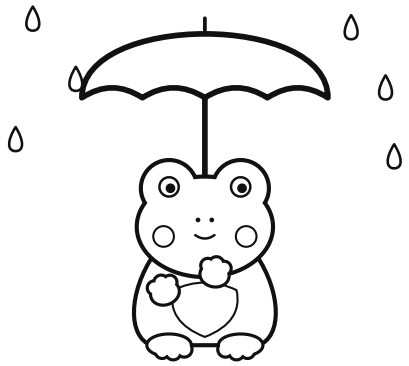

1. Breathe. A power cut is usually fixed within hours. Get your torch, not candles: the Red Cross advises avoiding candles where possible because of the fire risk.
2. Check whether it's just your home (look at your fuse box) or the street (look outside, or ask a neighbour).
3. Call **105** (free, England, Scotland and Wales) to report it or find out what's happening. Your local network operator also has a live power cut map online.
4. Keep the fridge and freezer **closed**. A closed fridge usually stays cold for about four hours; a full freezer keeps food frozen for around 48 hours (about 24 hours if half full).
5. Keep warm: layers, blankets, close curtains and doors. Get your calm kit.
6. Save your phone battery. Use your power bank. Your internet and landline may not work, and some mobile networks may not either.
7. If it's safe, check on anyone nearby who might need help.

Carbon monoxide: the one thing never to do

The NHS says **never use a barbecue or camping stove indoors** (or in a tent), and never run an engine in an enclosed space like a garage. Portable generators can also produce carbon monoxide. It has no colour and no smell. Signs include headache, dizziness, feeling sick, tiredness, confusion and breathlessness. If you suspect it, get outside into fresh air and get medical advice. Call **999** if someone is struggling to breathe, confused or unconscious. If you think a gas appliance is leaking, call the free National Gas Helpline on **0800 111 999** (24 hours).

If you get a flood warning

1. A **flood warning** means flooding is expected. A **severe flood warning** means there is a danger to life. If you or anyone else is in immediate danger, call **999**.
2. Move people, pets and important things to safety: upstairs or to higher ground.
3. Get your grab bag and calm kit ready, in case you need to leave.
4. If it's safe, turn off gas, electricity and water. **Never touch an electrical switch if you are standing in water.**
5. Do not walk, cycle or drive through flood water. It can hide debris and open drains, and may contain sewage.
6. Follow advice from your local council and the emergency services. Leave if they tell you to.
7. For updates, call Floodline on **0345 988 1188**.

If your phone sounds an emergency alert

1. The loud siren sound lasts about ten seconds. It's meant to be loud. You haven't done anything wrong. Ear defenders on if it helps.
2. Stop what you're doing and **read the alert**. It will tell you what's happening and what to do.
3. If you're driving, don't read it until you've stopped somewhere safe and legal.
4. Follow the instructions in the alert. It will include a phone number or a GOV.UK link for more information.
5. Real alerts never ask for personal details or send emails. Anything that does is a scam.

If you need to leave home

1. If the emergency services tell you to leave, go. Follow their instructions.
2. Take your grab bag, your medicines, your calm kit and your phone and charger.
3. Turn off gas, electricity and water if it's safe and you have time.
4. Go to your agreed meeting point or the place you've been told to go. Tell your emergency contact where you are.
5. Show your About me card to helpers if words are hard (Part 7).
6. If your home is damaged and you can't stay, contact your local council about emergency accommodation.

If you run out of your medicine

1. Look at the pharmacy label and your paper medicines list.
2. If you have a repeat prescription and you've run out, use **NHS 111 online** (the emergency prescription service) or call **111**.
3. Pharmacies can supply certain emergency medicines without a prescription, though you may have to pay.
4. Normally, order repeat prescriptions **up to five working days** before you need them, so you're never down to the last few.

If phones and the internet are down

1. Use your paper list of numbers and a landline or a neighbour's phone if they work.
2. Turn on your battery or wind-up radio for local news.
3. Go to your agreed meeting point at the agreed time, if that's part of your plan.
4. If you rely on telecare or a landline, make a plan now for a neighbour to check on you in person during an outage.

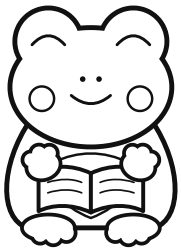

PART 7

Telling people what you need

In an emergency you may meet people you've never met before: neighbours, volunteers, firefighters, paramedics, people at a rest centre. They want to help, but they can't see what you need. And when you're overloaded, explaining is often the hardest part.

That's what the **About me card** is for. You fill it in now, calmly, and keep it in your purse, wallet, grab bag and calm kit. On the day you just hand it over. There are two to fill in and cut out in Part 10. It can say things like:

- How I communicate best (talking, writing, typing, pointing, a phone app).
- What happens when I'm overwhelmed, and what that looks like to other people.
- What helps (quiet, space, clear simple instructions, time to answer, a familiar person).
- What doesn't help (being touched, being rushed, lots of questions at once).
- My important medicines and any medical information.
- Who to contact.

Phrases you can point to

I'm finding it hard to talk right now. I can understand you.

Please give me simple instructions, one at a time.

I need a few minutes somewhere quieter.

Please don't touch me without asking.

Please write it down for me.

Please call the person on my card.

If you're deaf or use BSL, there is a 999 BSL service at 999bsl.co.uk, with an app.

PART 8

Family, children, pets and neighbours

Making the plan together

The Be Ready advice is to make a household plan and keep it with your important documents. Do it together, at a calm time, maybe over a cuppa. Agree:

- A **meeting point**: an easy-to-find place, or a family member's home if it's safe, in case you get separated or can't contact each other.
- A **back-up plan for anyone who needs extra support,** especially people who live alone. For example, someone visits in person if the phones are down.
- Who collects the children, who checks on whom, and where the kit lives.

Talking to children without frightening them

Keep it matter-of-fact: "Sometimes the lights go off or the weather is very bad, so we have a plan, like a fire drill." The Be Ready advice is to make sure children know their **home address** and a **parent's mobile number,** to talk to them about when and how to call 999, and to check the school has the right contact numbers. The Staywise website (staywise.co.uk) has resources for children.

Many children (and adults) feel better with a **practice run**: a torch-only evening, a "power cut picnic" from the kit, finding the meeting point on a walk. It turns the unknown into something they've already done.

Pets

Pets need food and bottled water too. If you have an assistance animal, the Be Ready advice is to pack its documents, vet records, food, water, lead or harness, medicines and a blanket in your grab bag.

Neighbours

The government suggests swapping contact details with neighbours (perhaps a street or building group chat), asking whether anyone might need extra support, and making a plan to check on each other, especially if the power goes off. There's a page for this in Part 10.

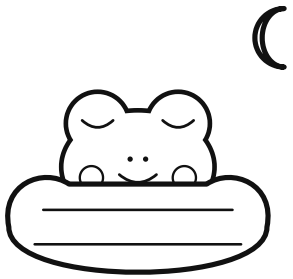

Carers

If someone relies on you, keep a list of emergency contacts and ask your council about a carer's card. If it's too dangerous to get to them, call the emergency services and tell them someone depends on you.

PART 9

Afterwards: putting things back, and putting yourself back

When the lights come back on, everyone else may carry straight on. It's very common for a neurodivergent brain to crash afterwards instead: tired, flat, overloaded, shut down. That isn't you being dramatic. You've been running on high alert. Recovery is part of the plan.

Your home

- **Fridge food:** if the power was off for more than four hours, check what's in the fridge. Food that needs refrigerating should be thrown away if it's been above 8°C for too long. The Red Cross rule is simple: **when in doubt, throw it out.**
- **Restock your kit** and recharge your power banks and torches, so you're ready next time.
- **Flood damage:** contact your insurer, and your local council if you can't live at home.
- Note what worked and what didn't, and change your plan. Every real event makes the plan better.

You

- Plan a quiet day if you possibly can. Cancel what can be cancelled.
- Get back to your usual routine, safe foods and sleep as soon as possible.
- Use your calm kit afterwards too, not just during.
- Tell someone how it went. It helps to say it out loud.
- If you're feeling unwell or very low and you're not sure what to do, NHS 111 can tell you what to do next.

You did it

However it went, you got through. Next time you'll have a plan written in your own handwriting, and that changes everything.

PART 10

Your plan

These pages are yours. Fill them in with a pencil so you can update them, then keep the book (or copies of these pages) somewhere everyone can find, with your important documents.

Repeat prescription is due on

Remember: order repeat prescriptions up to five working days before you need them. If you run out, use NHS 111 online or call 111.

Our three-day kit

From the official Be Ready checklist. Tick each thing as you gather it. Check dates every six months.

Water and food

- [ ] Bottled water: 3 litres per person per day, for 3 days
- [ ] Extra water for pets
- [ ] Non-perishable food for 3 days, that we usually eat
- [ ] Some food that can be eaten cold
- [ ] Tin opener (not electric)

Light and warmth

- [ ] Torch
- [ ] Spare batteries
- [ ] Blankets or sleeping bags
- [ ] Warm clothing

Information and phones

- [ ] Battery or wind-up FM radio
- [ ] Charged power bank
- [ ] Phone charging cable
- [ ] Numbers written on paper

Money and documents

- [ ] Cash: coins and notes
- [ ] Bank cards
- [ ] Copies of ID and important documents
- [ ] Insurance details
- [ ] Waterproof bag for documents
- [ ] Spare keys

Dates checked

Health

- [ ] First aid kit
- [ ] Essential medication
- [ ] Medical supplies and spare batteries for equipment
- [ ] Paper list of medicines and doses
- [ ] Spare glasses or contact lenses

Hygiene

- [ ] Hand sanitiser
- [ ] Wet wipes
- [ ] Toilet roll and bathroom products
- [ ] Bin bags

Babies (if needed)

- [ ] Ready-made formula
- [ ] Nappies and wipes

Pets (if needed)

- [ ] Pet food
- [ ] Bottled water for pets
- [ ] Lead, carrier, medicines

Our grab bag

A small bag by the door, for leaving quickly. One per person, or one for the household.

- [ ] Medicines (a few days' worth) and the medicines list
- [ ] Copies of documents in a waterproof bag
- [ ] Phone, charger and charged power bank
- [ ] Cash
- [ ] Torch and batteries
- [ ] Water and snacks
- [ ] A change of clothes and warm layer
- [ ] Glasses, hearing aid batteries
- [ ] About me card
- [ ] Calm kit items (below)
- [ ] Spare keys
- [ ] Pen and paper
- [ ] Toiletries and wipes
- [ ] Pet or assistance-animal items

My calm kit

The things that help me stay regulated. One page per person (copy it if you need more).

Name

Things for noise

Things for light

Comfort and textures

Safe foods and drinks

Things to keep my hands and mind busy

What helps me most when I'm overwhelmed

Where my calm kit lives

My usual day, on paper

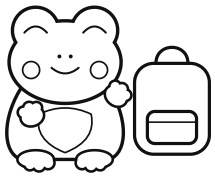

If the power is off, a written routine helps you keep as much of your normal day as you can.

Time	What I usually do	Power-cut version

Twelve weeks, one small step at a time

Add one thing to your normal shopping each week. In three months you'll have a full kit, and it won't have felt like a big spend or a big job.

Week	Add this	Done
Week 1	Torch and spare batteries. Write your numbers on paper.	
Week 2	A few litres of bottled water.	
Week 3	Tins and packets of food you already eat.	
Week 4	Tin opener, and a first aid kit (or top up the one you have).	
Week 5	More bottled water.	
Week 6	A power bank. Charge it and label it.	
Week 7	Hand sanitiser, wipes, bin bags.	
Week 8	A battery or wind-up radio.	
Week 9	Calm kit: ear defenders, eye mask, comfort snacks.	
Week 10	Copies of documents in a waterproof bag. Some cash.	
Week 11	Grab bag: pack it and put it by the door.	
Week 12	Finish the water. Do a practice evening. Celebrate.	

Our neighbours

Swap numbers, and agree who might need a knock on the door if the power goes off.

Name	House / flat	Number	Might need extra help with

Street or building group chat

Who has a radio, torch, or other things to share

About me cards

Fill one in, cut it out and keep it with you: in your purse or wallet, your grab bag and your calm kit. You can show it to helpers instead of explaining.

Tip: if you can, laminate it or keep it in a small plastic sleeve so it survives the rain.

First hour cards

Cut these out and keep them with your kit and torch.

Power cut

1. Torch, not candles.
2. Just us or the street? Check the fuse box, look outside.
3. Call 105.
4. Keep the fridge and freezer closed.
5. Layers, blankets, calm kit.
6. Save phone battery. Check on neighbours if safe.
7. Never a BBQ or camping stove indoors.

Flood warning

1. Danger to life? Call 999.
2. People, pets and important things upstairs.
3. Grab bag and calm kit ready.
4. Gas, electricity, water off if safe. Never touch switches standing in water.
5. Never walk or drive through flood water.
6. Follow the council and emergency services. Floodline 0345 988 1188.

Emergency alert

1. The siren lasts about 10 seconds. You're not in trouble.
2. Stop and read the alert.
3. Driving? Stop safely first.
4. Do what it says. It never asks for personal details.

Leaving home

1. Go if the emergency services say so.
2. Grab bag, medicines, calm kit, phone and charger.
3. Utilities off if safe.
4. Meeting point. Tell our contact where we are.
5. Show my About me card.

Afterwards

- [ ] Fridge food checked: when in doubt, throw it out
- [ ] Kit restocked
- [ ] Torches and power banks recharged
- [ ] Insurer contacted (if there was damage)
- [ ] A quiet day planned for me
- [ ] Back to my routine and safe foods
- [ ] What worked:
- [ ] What I'll change next time:

Notes

Where the information comes from

All the safety advice in this book is taken from these official UK sources, checked on 7 November 2026. Advice can change, so please look at them for the latest.

- NHS: "How to order a repeat prescription"; "Emergency prescriptions"; "Carbon monoxide poisoning"; NHS 111 (111.nhs.uk).
- British Red Cross: "Prepare an emergency kit"; "Power cut".
- London Fire Brigade: "Carbon monoxide safety"; "Candles".
- Northern Ireland Care Registers: nidirect.gov.uk/articles/care-registers. 999 BSL: 999bsl.co.uk. Staywise: staywise.co.uk.

This book is not connected to or endorsed by any of these organisations.

Thank you

for reading, and for looking after yourself and the people around you.

If this book helped, a quick review on Amazon helps more than you might think.
It only takes a minute, and it helps other people find it before they need it.
